Subject: RE: Animas River/San Juan River Information

Matt,

I don't believe there are any dams or spillways in NM on either the Animas or the San Juan River below the confluence. The only large impoundment of water along the San Juan River is at Navajo Lake, formed by Navajo Dam, but this is approximately 35 mile upstream of the confluence. I searched online for NM River Maps and looked carefully at Google Earth. I looked also at the NM Interstate Stream Commission and the US Corp of Engineers sites.

Do you have reason to believe there may be such structures in those locations?

Hello gentlemen, as you know we are heavily involved in the activities and sampling after the Gold King Mine Spill. We are looking for some information for our sampling efforts.

We would like to get a map of the dams and spillways on the Animas River in New Mexico. It would probably help to include such structures on the San Juan River as well, maybe for 50 miles or so downriver from the confluence with the Animas.

Would you be able to assist with this or know of someone I could talk with? Thanks!
